skills through first-hand experience. In art, such learning depends on exploring and experimenting with the visual language through which artists communicate, and the visual elements such as line, colour and shape. The National Curriculum places strong emphasis on experimenting with and applying the visual elements. This book systematically explores the basic knowledge needed to do this effectively. The author deals with the visual elements of art, their properties, how they are

related, and especially with the ways in which children's knowledge of each can be developed through simple but creative activities. Each element is placed in context, with extensive cross-referencing. The author shows how these elements can be observed in the children's environment and provides examples of how they have been used in works of art and craft. Although there would be much disagreement as to the exact proportion of papers published in developmental journals that could be considered cognitive, 50% seems like a conservative estimate. Hence, a series of scholarly books devoted to work in cognitive development is especially appropriate at this time. The Springer Series in Cognitive Development contains two basic types of books, namely, edited collections of original chapters by several authors, and original volumes written by one author or a small

more significantly, inappropriate - for people as they age. Older women in particular have long been subject to social pressure to tone down, to adopt self-effacing, covered-up styles. But increasingly there are signs of change, as older women aspire to younger, more mainstream, styles, and retailers realize the potential of the 'grey market'. Fashion and Age is the first study to systematically explore the links between clothing and age, drawing on fashion theory and cultural gerontology to examine the changing ways in which age is imagined,

experienced and understood in modern culture through the medium of dress. Clothes lie between the body and its social expression, and the book explores the significance of embodiment in dress and in the cultural constitution of age.

Drawing on the views of older women, journalists and fashion editors, and clothing designers and retailers, it aims to widen the agenda of fashion studies to encompass the everyday dress of the majority, shifting the debate about age away from its current preoccupation with dependency, towards a fuller account of the lived experience

Reflecting the theory that young children respond best to bold, contrasting colours and graphics, this high-contrast board book is a great way to captivate and hold a baby's attention and encourage their visual development.

How do young infants experience the world around them? How similar or different are infants' experiences from adults' experiences of similar situations? How do infants progress from relatively sparse knowledge and expectations early in life to much more elaborate knowledge and expectations just several months later? We know that much of infants' learning before four to five months of age is visually-based. As they develop the ability to reach for objects independently, they can explore objects that are of

particular interest to them—a new skill that must be important for their learning. Through this transition to independent reaching and exploration, infants go a long way toward forming their own understandings of the objects around them. Towards the end of the first year of life, infants begin manipulating one object relative to another and this skill sets the stage for them to begin using objects instrumentally—using one object to create changes in other objects. This new ability opens up many opportunities for infants to learn about

using tools. In this volume, Amy Work Needham provides an extensive overview of her research on infant learning, with a particular focus on how infants learn about objects. She begins with an explanation of how basic aspects of how infants' visual exploration of objects allows them to create new knowledge about objects and object categories. She continues with a description of infants' visual and manual learning about hand-held tools and how these tools can be used to achieve goals. Throughout, she focuses on active learning

and development, which results in infants making important contributions to their own learning about objects. She concludes by synthesizing the findings discussed, pulls out recurring themes across studies, and brings together fundamental principles of how infants learn about objects.

your child will be asked to do when working on this coloring book. There are 8.5 x 8.5-inch pages entirely dedicated to it. Your child will be asked to color shapes and faces, too. Colors - The more coloring pages your child does, the stronger his/her knowledge of the color wheel becomes! Give him/her more color options, and he/she will be naming them in no time. Shapes - As your child works through the pages of this coloring book, he/she will realize that there is an abundance of shapes in every image. This realization will open the doors for drawing exercises, and overall "no word"

communication excellence, later on. Patterns - Another cool mental challenger included in this activity book has something to do with patterns. Your child will have to look carefully and decide which part of the pattern is inconsistent with the rest. Other times, he/she might even have to draw the image that comes next in the pattern. Diversity - Again, the primary purpose of this book is for kids to realize that diversity exists. There many races around the world and each has its unique features. Some may have dark-colored skin, while others are fair. Some may have red hair,
