Fouberg/Murphy: Human Geography: People, Places, and Culture 12th edition teaches students to appreciate the diversity of people, places, and cultures, and understand the role people play in shaping our world. The goals of this edition are to provide geographic context to global, regional, national and local issues and to teach students to think geographically and critically about these issues. Human Geography features beautifully designed maps, dozens of vibrant photographs taken by the author team, and author and guest field notes that help students see how geographers read cultural landscapes and use fieldwork to understand places. Fouberg's Human Geography, 12th Edition now integrates Threshold Concepts to help students develop their ability to think geographically. Once they learn and apply one of these concepts in the context of a given place, students integrate it into their thinking and can draw from it as they learn new material and explore other places.

An innovative introduction to Human Geography, exploring different

ways of studying the relationships between people and place, and putting people at the centre of human geography. The book covers behavioural, humanistic and cultural traditions, showing how these can lead to a nuanced understanding of how we relate to our surroundings on a day-to-day basis. The authors also explore how human geography is currently influenced by 'postmodern' ideas stressing difference and diversity. While taking the importance of these different approaches seriously as ways of thinking about the role of place in peoples' everyday lives, the book also tries to encapsulate what has been so vibrant and exciting about human geography over the last couple of decades. By using examples to which students can relate - such as how they imagine and represent their home, the way they avoid certain spaces, how they move through retail spaces, where they choose to go to university, how they use the Internet, how they represent other nations and so on - the authors show how geography shapes everyday life in a manner that is seemingly mundane yet profoundly important. In four chapters and an introduction, this book systematically helps readers understand the development of the Geographical Sciences both in China and in the world during the past 30 years. Through data

analysis of methodologies including CiteSpace, TDA, qualitative analysis, questionnaires, data mining and mathematical statistics, the book explains the evolution of research topics and their driving factors in the Geographical Sciences and its four branches, namely Physical Geography, Human Geography, Geographical Information Science and Environmental Geography. It also identifies the role of the Geographical Sciences in the analysis of strategic issues such as global change and terrestrial ecosystems, terrestrial water cycle and water resources, land change, global cryosphere evolution and land surface processes on the Tibetan Plateau, economic globalization and local responses, regional sustainable development, remote sensing modelling and parameter inversion, spatial analysis and simulation, and tempo-spatial processes and modelling of environmental pollutants. It then discusses research development and inadequacy of Chinese Geographical Sciences in the above-mentioned topics, as well as in the fields including Geomorphology and Quaternary environmental change, Ecohydrology, ecosystem services, the urbanization process and mechanism, medical and health geography, international rivers and transboundary environment and resources,

detection and attribution of changes in land surface sensitive components, and uncertainty of spatial information and spatial analysis. It shows that the NSFC has driven the development in all these topics and fields. In addition, the book summarises trends of the Geographical Sciences in China and the research level in major countries of the world through an overview of geographical education in colleges and universities, the analysis of publications, citations and author networks of SCI/SSCI and CSCD indexed articles, and the description of Sino-USA, Sino-UK and Sino-German cooperation. This book serves as an important reference to anyone interested in geographical sciences and related fields.

Human Geography 10th Edition includes all of the important concepts and theory on Human Geography as previous issues with a more succinct and engaging narrative while going in depth to touch on all the major themes of the topic. The text focuses on identity and how every human being forges an identity in a globalized world. It includes recurring coverage of "identity" and how people make places and shape identities to see global, local and individual implications of decisions that people make every day. The main objective of this issue

Understanding World Regional Geography (UWRG) is a course designed to teach students to think and apply geographic concepts long after the course is over. Author Erin Fouberg draws from her expertise in geography education and research in student learning to create a product that has a strong pedagogical framework designed to engage students and deepen their understanding of the world by having them “DO” Geography. UWRG includes features that help students learn to read cultural and physical landscapes, ask geographic questions, apply geographic concepts, and make connections. It integrates 25 threshold concepts and teaches students how geographers apply these concepts and asks them to apply these concepts themselves. This enables them to grasp the complexities of the world and provides them with the knowledge and thinking skills necessary to understanding it. UWRG is the first introductory course to integrate ESRI ArcGIS Online thematic maps, enabling students to engage with course materials, see patterns, and answer geographic

As with the First Edition,

Boyle follows the premise that “history makes geography whilst geography makes history,” and that the key to studying the principal demographic, social, political, economic, cultural and environmental processes in any region in the world today is to look at how that region has been impacted by, and in turn has impacted, the story of the rise, reign, and decline of the West. Moreover he argues that Human Geography itself is best understood as both an intellectual endeavour and a historical, political, and institutional project. Informed by recent developments in post-colonial scholarship, the book covers key concepts, seminal thinkers, and influential texts in the field. Although designed for the beginner student, Boyle does not shy away from ideas and debates often avoided in introductory texts, clearly communicating theory without condescension. In addition, he places human geography in its larger academic context, discussing the influences on the field from related subjects. Notable features in the Second Edition include: Extensive revision and updating of coverage of key ideas, developments, debates and case studies New chapter on uneven geographical development at different scales and development theory and
