

## Management And Cost Accounting Drury 8th Edition

This report investigates the presentation and analysis of financial information in 41 UK Manufacturing companies. Traditional and contemporary accounting techniques are exemplified in the case studies. With old and new techniques explored, the research shows that there is little that is new in management accounting theory and practice. The study concludes that there is not one set of practices which all should follow. - Cima research report - reveals methods currently used for reporting financial information in UK manufacturing companies. - Based on 41 companies, it shows a rich diversity of reporting practices that are constrained neither by the financial accounting requirements of SSAP9 nor by any sense of general management accounting trends. - Financial Directors choose from a toolkit of 'traditional' and 'contemporary' practices in constructing reporting systems appropriate to their varied commercial needs, but with a strong leaning towards contribution margin approaches.

*Standard costing is the foundation upon which much management accounting and budgetary practice rests, yet it is often misunderstood. In this book Colin Drury sets out the nature and scope of standard costing whilst clearly identifying its limitations. The calculation and interpretation of the full range of cost accounting variances is covered, together with the formal analysis of the decision to investigate variances. The way in which standard costing information is recorded in the accounts is also dealt with in depth, as this step is essential to a full appreciation of the role of standard costing. Finally, the usefulness of traditional standard costing techniques in a modern production environment is assessed.*

*Scholarly Research Paper from the year 2004 in the subject Business economics - Accounting and Taxes, grade: 2, Glynd r University, Wrexham known as NEWI (Business school), 5 entries in the bibliography, language: English, abstract: During the last decades there was a change in organisations from managing vertical to managing horizontal. The organisations started to become process orientated instead of function orientated, and new management styles, like total quality management, just in time, benchmarking, or business process reengineering appeared. Which lead into an increase of overheads. (Drury 2004a) The most important cost factors changed from direct costs like labour costs or materials, into indirect costs like set-up costs or administration costs. Therefore the traditional costing systems became more or less useless, because they presented poor cost information, which leads into decision errors. Therefore the ABC- system of cost calculation seems to be a solution. The most important difference between traditional systems, and the ABC system, is the breakdown of overheads. In traditional costing systems, they are divided into cost centres, and accumulated products by using direct cost drivers. In the ABC system, they will be assigned to activities, which creates a greater number of cost centres with different cost drivers. They will be accumulated to products in the percentage of usage of an activity. In this paper the ABC-system of cost calculation is discussed and how it can be implemented successfully within an organisation. Attention is also*

To establish an ABC-approach within an organisation more than just a new calculation system is needed. An ABC-approach has to be implemented in the management system (ABM) and in the budgeting process (ABB). All in all, Activity based costing is much more than just a costing tool.
