In 2010, the Newseum in Washington D.C. finally obtained the suit O. J. Simpson wore in court the day he was acquitted, and it now stands as both an artifactin their STrial of the Century exhibit and a symbol of the American media "s endless hunger for the criminal and the celebrity. This event serves as a launching point for Ishmael Reed "s Juice!, a novelistic commentary on the post-Simpson American media frenzy from one of the most controversial figures in American literature today. Through Paul Blessings "a censored cartoonist suffering from diabetes "and his cohorts "serving as stand-ins for the various mediums of art "Ishmael Reed argues that since 1994, SO. J. has become a metaphor for things wrong with culture and politics. A lament for the death of print media, the growth of the corporation, and the process of growing old, Juice! serves as a comi-tragedy, chronicling the increased anxieties of Spost-race America.

The information infrastructure - comprising computers, embedded devices, networks and software systems - is vital to operations in every sector: chemicals, commercial facilities, communications, critical manufacturing, dams, defense industrial base, emergency services, energy, financial services, food and agriculture, government facilities, healthcare and public health, information technology, nuclear reactors, materials and waste, transportation systems, and water and wastewater systems. Global business and industry, governments, indeed society itself, cannot function if major components of the critical information infrastructure are degraded, disabled or destroyed. Critical Infrastructure Protection XI describes original research results and innovative applications in the interdisciplinary field of critical infrastructure protection. Also, it highlights the importance of weaving science, technology and policy in crafting sophisticated, yet practical, solutions that will help secure information, computer and network assets in the various critical infrastructure sectors. Areas of coverage include: Infrastructure Protection, Infrastructure Modeling and Simulation, Industrial Control System Security, and Internet of Things Security. This book is the eleventh volume in the annual series produced by the International Federation for Information Processing (IFIP) Working Group 11.10 on Critical Infrastructure Protection, an international community of scientists, engineers, practitioners and policy makers dedicated to advancing research, development and implementation efforts focused on infrastructure protection. The book contains a selection of sixteen edited papers from the Eleventh Annual IFIP WG 11.10 International Conference on Critical Infrastructure Protection, held at SRI International, Arlington, Virginia, USA in the spring of 2017. Critical Infrastructure Protection XI is an important resource for researchers, faculty members and graduate students, as well as for policy makers, practitioners and other individuals with interests in homeland security.

Heb je wel eens het gevoel dat je je een slag in de rondte werkt en toch constant in tijdnood verkeert? Dat vrienden en familie meer aandacht vragen, terwijl je nauwelijks tijd hebt voor jezelf Stephen Covey beantwoordt in dit boek de vraag hoe het komt dat we de prioriteiten in ons leven toch maar zo zelden op de eerste plaats laten komen. Jarenlang zijn ons methodes en technieken aangereikt om efficiënt met onze tijd om te gaan. Als we maar hard genoeg werken en leren kunnen we alles beter en sneller doen. Maar vaak is dat niet genoeg, en dan nemen de schuldgevoelens alleen maar toe Timemanagement volgens Covey biedt een heldere methode gebaseerd op principes, niet op tips en trucs. Daarmee kun je de focus houden op wat echt belangrijk is, een goede werk-privébalans hanteren en afgewogen keuzes maken. Wie met Covey het probleem bij de wortel aanpakt, hoeft zich nooit meer af te vragen of hij met de verkeerde zaken bezig is. Dan is timemanagement niet meer een kwestie van tijd maar van prioriteit.

This book describes a new class of computing devices which are becoming omnipresent in every day life. They make information access and processing easily available for everyone from anywhere at any time. Mobility, wireless connectivity, di- versity, and ease-of-use are the magic keywords of Pervasive and Ubiquitous Computing.
